

Ocularis 5

SMARTER SURVEILLANCE FOR SAFER SCHOOLS

Smart Motion Detection

Is it a couple, a crowd, or a stampede of students? Third-party integrations for smart motion detection enable you to read the situation on the ground and avoid under or over reaction. With object-left detection, you will know if a backpack has been suspiciously left behind and investigate swiftly.

Quick Response

Ocularis can play an essential role in alerting security and law enforcement immediately once a security threat has been detected. Instantly share as many or as few of your cameras with law enforcement to ensure minimal response times to quickly address any developing situation.

Full On-the-Go Coverage

Ocularis delivers real-time, full-motion video directly to your mobile phone or web browser. Monitor and control live or recorded HD camera streams, control PTZ cameras, get notifications when a pre-configured event is triggered, and even stream live video from your mobile device to be recorded and viewed in Ocularis.

System Integration

Ocularis easily integrates with an array of physical security solutions such as access control, video content analytics, emergency phones, and license plate recognition to prevent threats as well as address a variety of issues from hallway bottlenecks to efficient evacuation tactics.

Vandalism Prevention

Is it a soda can or a spray can? With seamless third-party integrations, examine behavioral analytics and make sense of practically any situation. And Ocularis' server-based tampering detection will immediately trigger an alarm if the camera lens is spray painted or obstructed in some other way.

Asset Tracking

Discern if the movement of valuable equipment is typical or suspicious. Ocularis aggregates data from entry management systems and RFID tags so that you can track and recover assets.
